### Television violence and children's aggression: testing the priming, social script, and disinhibition predictions

It also suggests those 2 hours be filled with educational shows, not random mishmash. We used both fixed- and random-effects analyses, although the 2 approaches yielded the same pattern of results.

### Television Violence and its Impact on Society essay

However, much of the past research on media violence has focused on short-term effects and reported significant relations only for boys.

### Questionnaire on the Effects of TV Violence on Children

Anxious children can be especially prone to believing this fallacy if it is happening in their own lives with bullies.

### Violence in the media: Psychologists study potential harmful effects

Finally, parents need to be as concerned about the beliefs and attitudes that are being conveyed in violent shows as they are about their child mimicking the behaviors shown.

### Questionnaire on the Effects of TV Violence on Children

Therefore, they should not necessarily behave in the violent way as they watch other people behave on television. Comment In summary, none of our theoretical predictions about the relationship between exposure to media violence and subsequent aggression were contradicted by the meta-analytic data.

### Television violence and children's aggression: testing the priming, social script, and disinhibition predictions

Because the confidence intervals exclude the value 0, the average correlations were all significantly different from 0. This pattern of results would be supported by a significant interaction between the type of study and age on violent media—related effect size estimates.
