Gallbladder cancer is relatively rare and is normally only diagnosed at a late stage because symptoms are similar to gallstones. Over time the body compensates; a small pouch develops in the small intestine which means food can be stored a little longer before being pushed on its way. Some people do have part or all of their small intestine removed small bowel resection, either because it is diseased by cancer or blocked due to a birth defect.

### **Anatomy System**

Hemorrhage: Bleeding in the brain, most common cause is stroke. It can cause a loss of appetite and a sense of fullness after eating very little. Growth and development occur after birth, and include both physical and psychological development, influenced by genetic, hormonal, environmental and other factors.
