Over the course of his work in mathematics, Al-Khwarizmi introduced the use of Indo-Arabic numerals, which became known as algorithms, a Latin derivative of his name. In 1990, most upper secondary schools had yet to introduce basic computer systems for educational purposes; today, almost all have done so, with access to Internet and e-mail for most by the end of the 1990s. Fortunately, the spirit of what Gardner started with his columns and books continues via a series of events to remember him and his name.

Martin Gardner in 1932 Courtesy of Wikipedia Many mathematicians see their subject as magical - having unexpected surprises and delights. For simplicity we will assume that the birthdays of the 4 people are independent of each other, and they are equally likely to be on any particular day. So Gardner's column occupied the niche of high interest in the status of the conjecture that pre-dated the appearance of a proof.
