Global warming

Due to confusing media coverage in the early 1990s, issues such as ozone depletion and climate change were often mixed up, affecting public understanding of these issues. To keep warming below 2 °C, more stringent emission reductions in the near-term would allow for less rapid reductions after 2030. Climate emergency declarations have been made in 983 separate and local governments in 18 countries covering 212 million citizens.

Global Warming 101

On a longer time scale, fresh water will become scarcer, especially during the summer, as mountain glaciers disappear, particularly in Asia and parts of North America. A warmer climate creates an atmosphere that can collect, retain, and drop more water, changing weather patterns in such a way that wet areas become wetter and dry areas drier.

Global Warming 101

This mismatch can limit the ability of both pollinators and plants to survive and reproduce, which would reduce food availability throughout the food chain. Geological Survey projects that two-thirds of polar bears will disappear by 2050. Other policy In 2019, the became the first national government in the world to officially.

What is global warming, facts and information?

Over the past 50 years, the average global temperature has increased at the fastest rate in recorded history.

NASA: Climate Change and Global Warming

The increased volumes of carbon dioxide and other greenhouse gases released by the burning of fossil fuels, land clearing, agriculture, and other human activities, are believed to be the primary sources of the global warming that has occurred over the past 50 years. This could trigger cooling in the North , Europe, and North America. Water vapor is a strong greenhouse gas.

NASA Video Shows 50

Temperatures across the globe dipped for two to three years.
