Pseudomonas fluorescens

Transformants expressing EDS1-PAD4 from tomato were as resistant to Hpa Cala2 as transformants expressing the Arabidopsis homologs and indistinguishable from wild-type Col-0. Journal of General Microbiology, 38:1-7.

Pseudomonas infections in fish

The phagocytic and bactericidal activity significantly increased in P. At least 50 single-cell interaction sites originating from representative sheath sections were examined per replication.

EDS1

Micrographs depict representative examples: category A, vigorous invasion of living tissues in the absence of visible host responses; category B, occurrence of cytoplasmic vesicles and slight browning of the anticlinal walls of the first-invaded epidermal cell following fungal invasion of neighboring cells; category C, epidermal cells expressing so-called WPSR Koga et al. EDS1 and SAG101 both contain an N-terminal hydrolase-like and a C-terminal EP domain. Treatment with *Pseudomonas fluorescens* and *Pseudomonas putida* bacteria, inducing robust PTI responses in Solanaceae ; , moderately induced expression of EDS1 family genes 6 h after treatment.

Pseudomonas fluorescens WCS374r

Using the MAMP-responsive reporter line pCYP71A12::GUS Fig. The roq1 mutant line was a T 1 line segregating for two disruptive alleles at the Roq1 locus Supplemental Fig. Six days after challenge inoculation, disease was rated by counting the number of susceptible-type lesions on the fourth leaves of individual plants and expressed relative to challenged controls.
