This is done by illustrations that combine drawings of tumours at various anatomical subsites, details of the respective surgical procedures, the specimens thus obtained, and the way to dissect these specimens as shown by colour photographs of surgical specimens handled in the way schematically outlined. The most common and significant disease is the inflammation of the tissues of the periodontium, or periodontal disease.

Manual Of Surgical Pathology

Although this process can be stabilized, it is not easily reversible and can ultimately lead to tooth loss.
