The major source of ROS production in the cell is the mitochondrial respiratory chain, which, as described earlier, utilizes approximately 80 to 90 percent of the O₂ a person consumes.

Free radicals and antioxidant systems in health and disease.

Studies employing a commonly used model in which alcohol is administered directly into the stomach of laboratory animals i. ROS also are produced by a variety of oxidative enzymes present in cells, such as the previously mentioned xanthine oxidase. After glutathione has lost its electron, it is regenerated enzymatically so that it can perform its antioxidant function once again.

Free radicals: Their history and current status in aging and disease.

Free Radicals in Biology and Medicine

Lipid peroxidation: mechanisms, analysis, enzymology and biological relevance in oxidative stress.

Free

The glutathione peroxidase system consists of several components, including the enzymes glutathione peroxidase and glutathione reductase and the cofactors glutathione GSH and reduced nicotinamide adenosine dinucleotide phosphate NADPH. One way that catalase eliminates hydrogen peroxide is by catalyzing a reaction between two hydrogen peroxide molecules, resulting in the formation of water and O₂.
