The vertebra above the abdomen No.

Angler Naturalist by Cholmondeley Pennell

They differ in number, size, and the nature of the rays which support them, being sometimes spinous, and at others soft and articulated. The buccal cavity or mouth cavity is morphologically a stomodaeum, i. In treating of the geographical distribution of modern fishes, it is necessary to distinguish between fresh-water and marine forms.

Analyses made on 130 selected metallized and random samples showed anomalous amounts of gold and eight or more other elements. When the frost sets in they at first decline the bait, and come to air holes cut in the ice, but rarely; as the cold increases, it is found useless to attempt to fish; for they sink in the deepest water, and become torpid until the approach of spring, when they are again eager to bite at air holes, cut for that purpose.
