white spots, this very large insect came over to the UK from China, Japan and Korea. What it looks like: This creepy crawler get its name from its silvery scales and three, tail-like appendages that protrude from its abdomen.

Beetles

The Animal and Plant Health Agency quickly located and destroyed the hornet nest, but it is possible this that species could reappear. These can often cause concern, as they mimic wasps and bees, but are actually perfectly harmless insects without a painful sting! Chrysops caecutiens Splayed deerfly Identification: Chrysops caecutiens is a medium-sized deerfly with a body length of 9-10 mm. Wood Boring Weevil Latin name: Pentarthrum Huttoni Appearance: Reddish brown in colour, this European beetle is a small insect found predominantly in buildings — where it can cause extensive damage.

Identifying insects

The body of the cellar spider is usually , with legs extending another 2 inches. Delicious Insects have been eaten for millennia by billions of people in 80% of countries, where they are regarded as a delicacy. These bees will likely find a home burrowed underground, or in old dead wood or brickwork.

5 Parasites That Breed On and In Your Skin

Try putting such piles in different places around the garden to encourage as many species as possible. .
