Polish astronomer Copernicus is born

I've always believed in strong starts. . He spent most of his life in Poland.

Nicolaus Copernicus

John Banville has a better command of the English language than anyone I've read; -- his vocabulary can stymie the most devoted literature student. If so, is it reason enough? The first two sections of the novel cover the astronomer's life up to age sixty-six or thereabouts.

And, he is a brilliant writer. John Banville personifies the art of writing sentences in which we hear that wonderful harmonic chime that makes us believe that's possible to write the way he does.

DOCTOR COPERNICUS

While studying at the University of Bologna, he lived for a time in the home of Domenico Maria de Novara, the principal astronomer at the university. But Rheticus was the only Wittenberg scholar who accepted the heliocentric idea. He took up residence in his chapter of Frombork in 1510 and stayed there the rest of his life.
