Either way how do I start giving values to the components to make a DC to DC Converter Work for a Set Voltage in mind, say 300kv? A circuit is a network of different components. Now, let us understand each of these in detail: A Simple Analog Circuit Analog Electronic Circuits are those in which signals may vary continuously with time to correspond to the information being represented. How do I go about starting a design for an inverter that outputs 15kv ac? Hence it is called as a mixed signal circuit.
