A universal classification of eukaryotic transposable elements implemented in Repbase

An object also referred to as an item is a specific piece of information that has a set of defined operations. Its precise definition will vary with the nature of the data object.

Types of Information Systems

Adjusting the Brand Name dial would run through all the other brand names.

Types of Information Systems

Different people and different systems will therefore refer to a study using different registry IDs.

Revisiting subject classification in academic databases: A comparison of the classification accuracy of Web of Science, Scopus & Dimensions

Understanding searchers, their contexts and environments, behaviors, and intentions is just as important as understanding how search engines work. Hierarchies divide and redivide things into groups where each new group is a sub-species of its parent group; everything that is true of a group is also true of its sub-groups and so on down Kwasnick 1999, 25.
