The results indicate that SBA-15 is a good support for the immobilization of Hb due to its regular structure, large pore diameter, and high surface area.

Please contact me if you are interested in our PhD program and have strong interests in data science and software engineering research, e. While traditional management of Type 2 diabetes has focused mainly on glycemic control, robust evidence supports the integration of hypertension and dyslipidemia management to reduce the risk of cardiovascular disease. Furthermore, beyond learning representations for specific tasks, representation learning allows us to identify and disentangle the underlying causal factors, to tease apart the underlying dependencies of the data, so that it becomes easier to understand, to classify, or to perform other tasks such as, even, controllable and interpretable data generation or manipulation.
